

## Drink2Go – the versatile flask system by Emsa

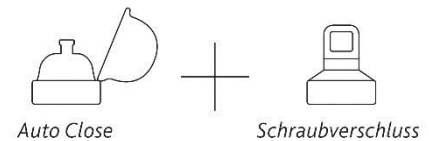

Over two million disposable bottles are used every day in Germany. Given the unbelievable amounts of waste this generates, more and more people are now turning their backs on plastic bottles in favour of reusable flasks. With a wide, varied range of flasks available, everyone can find their own personal favourite in Emsa's Drink2Go system. There are three types of flasks and two different lids to choose from.

The **Tritan®** flasks impress with their sophisticated glass-like appearance. Made from a robust yet lightweight plastic material, they are completely fracture-resistant and 100% leak-proof – even for carbonated drinks. What's more, the attractive bottles are also dishwasher-safe. With two new designs available, the Drink2Go Tritan® range is now even more varied than before. Fans of purist design are sure to love the "Waves" option, while the new "Paper planes" design is perfect for all the daydreamers and globetrotters out there.

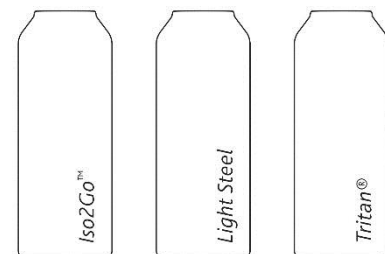

The **Iso2Go** flasks provide optimum insulation for both hot and cold drinks, with bottles made of insulated stainless steel to eliminate the risk of scalding.

The Drink2Go **Light Steel** flasks captivate with their fantastic motifs for kids. Made of lacquered stainless steel, they are incredibly lightweight, dishwasher-safe and compact.

All three bottles can be used interchangeably with two different lids. The **auto-close lid** is incredibly intuitive to use, with a pleasantly soft drinking nozzle. It can also be separated into three parts for easy hygienic cleaning, even in the dishwasher.

The two-part **twist-off closure** is also dishwasher-safe, plus the bottle has a wide opening at the neck, making it easy to fill and clean. There is also a small opening at the top for ergonomic drinking. Hot or cold, to go, at the gym or in the office – with the right lid, everyone is sure to find the right flask to suit their needs.

**Find the perfect solution with the flask selection tool**

Still looking for the right flask? Try the flask configuration tool on [www.emsa.de](http://www.emsa.de) to help you find the perfect flask – one that’s tailored to your individual needs.
